

More Information

To purchase Credence, visit your local farm merchant, veterinary, farm consultant or order direct via LWT Animal Nutritionists.

For full information on research trials conducted in a variety of species of animals including the control of toxic blue green algae in New Zealand troughs and dams, please visit:

www.animalnutrition.co.nz

Credence is registered as an approved sanitiser and disinfectant with MPI NZ.

Dirty, contaminated water in your troughs & dams?

Need a safe and effective disinfectant on your farm?

Keep your rural drinking water safe

Credence is versatile enough to be used for all your cleaning and disinfecting needs.

Use to clean equipment, sheds, foot & wheel baths

Credence can be used for cleaning all sorts of farm areas and equipment as part of an effective biosecurity program, including concrete yards.

Control water-borne diseases on your farm

Credence is the safe & effective water sanitiser.

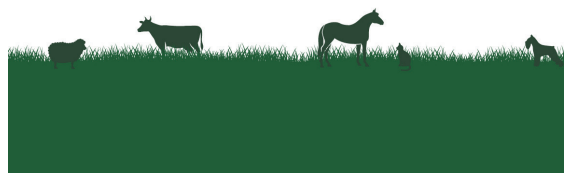

Credence is a product of:

**Credence
Water Sanitiser**

for safe water and biosecurity on farm

Are you fed up with cleaning troughs by hand?

Sick of worrying about using corrosive chemicals?

Persistent diseases a big problem on your farm?

Are your animals exposed to Leptospirosis?

Contamination in Rural New Zealand

Research has shown that New Zealand rural water supplies are commonly contaminated with toxic bacteria, protozoa and algae.

These cause poor growth, gastroenteritis, neurotoxicity, liver and kidney damage and can be fatal to young animals. Many farms have problems with controlling diseases, especially in young animals such as calves. Effective cleaning of housing and equipment as well as biosecurity foot and wheel baths is essential to limit disease exposure.

Credence is a slow release sanitiser that is highly effective for treating rural water – keeping it free of toxic organisms – and for all your disinfecting and sanitising needs on farm.

Credence is effective against:

- *Listeria monocytogenes*
- *Salmonella*
- *E. coli*
- *Campylobacter jejuni*
- *Shigella sonnei*
- *Staphylococcus aureus*
- *Streptococcus dysgalactiae*
- *Klebsiella pneumonia*
- *Leptospira interrogans ser. Icterohaemorrhagiae*
- *Yersinia enterocolitica*
- *Faecal coliforms*
- *Pseudomonas aeruginosa*
- *Clostridium*
- *Giardia lambia*
- *Aspergillus*
- *Cladosporium*
- *Citrobacter freundii*
- *Aeromonas hydrophila*
- Avian influenza virus
- Rotavirus
- Toxigenic cyanobacteria (blue green algae)

No Dangerous Copper

Credence DOES NOT have the problems seen with copper sulphate water treatments – such as toxicity in sheep and mineral imbalances which can lead to broken bones in animals.

Less Corrosion

Credence is less corrosive than other disinfectants, without compromising effective cleaning. It can be used in water lines in poultry and pig units and dairy sheds.

Safer for Animals

Once cleaned with a single rinse of Credence solution, sheds and equipment are safe for animal contact. Worry less about cleaning teated bottles or animals chewing on wood and licking floors.

Dilution & Uses

Use	Litres per tablet
Biosecurity / Footbaths	5 L
Equipment Washing	10 L
Non-porous	15 L
Hand/Udder Washing	100 L
Water Systems Clean Out	200 L
Drinking Water / Troughs	1000 L
