

TEATEASE UDDER CREAM for lactating cows

Recognised as the “Rolls-Royce” of udder creams, Teatease® provides dairy farmers with a unique proven chemically complex udder cream with antiseptic properties potent against gram negative and gram positive bacteria. This gives Teatease® the unique ability to aid in the control of Mastitis.

Mastitis is caused by a variety of different bacteria or germs and a common source of infection can be dirty teat cup liners. They accumulate skin fat and dried milk fat both of which can harbour germs in the invisible cracks and in the rubber. Due to this it is vital to apply the recommended amount of a reliable udder cream such as Teatease® that has effective action against the Mastitis causing bacteria and germs.

Other key features of Teatease® are:

- Odourless
- Non-tainting
- Heals cracked teats
- Soothing emollient action
- Promotes healing of minor cuts and abrasions
- Non lanolin base
- Disinfects hands and arms.

Teatease® also offers nil withholding times for milk, meat and has nil residues.

The smooth cream goes a long way and at the recommended use rates the two key pack sizes will treat:

3.5 kg = 100 cows twice daily for 1 month

10kg = 285 cows twice daily for 1 month.
