- Improves stamina
- Enhances immune performance
- Provides excellent mineral nutrition
- Reduces feed protein requirements

Leading to extensive animal health
and wellbeing benefits

**IMPROVES STAMINA
& RECOVERY FROM
EXERCISE ¹**

**ENHANCES IMMUNE
SYSTEM FUNCTION ²**

**IMPROVES MINERAL
ABSORPTION AND
PROTEIN UTILISATION ³**

equi-knewe®

Health & wellbeing benefits include:

1

Polo ponies fed Equi-Knewe® played longer and recovered more quickly. A trekking horse recovered noticeably better overnight each night, during a week-long trek. Protected protein improves coat condition.

2

Polo ponies fed Equi-Knewe® recovered from minor injuries more quickly. An older horse fed Equi-Knewe® recovered from insulin resistance and consequent laminitis.

3

Highly bioavailable magnesium reduces excitability in herd, group or competition environments, making floating and handling calmer and more stress-free. Better feed protein utilisation allows a reduction in diet protein concentration. This leads to better gut health and less offensive dung odour.

A natural prebiotic for horses that enhances performance & wellbeing

It is a palatable, easily-fed supplement that improves feed utilisation, enhances immune function, and ensures proper magnesium nutrition. Therefore, it creates a calmer and more trainable horse.

Horses in work or competition have greater stamina and recover from exercise more rapidly. Fed at 330g/day, it allows a 15% reduction in dietary crude protein, without impact on body condition. It therefore reduces nitrogen excretion by 15%.

Equi-Knewe®

Manufactured under licence by Lantmännen Agroetanol AB, the Swedish Farmers' Cooperative, for Knewe Biosystems NZ Ltd.

Equi-Knewe® is made from fermentation products by a patented process, in which the acidic components are reacted with nutritionally-important minerals. This process makes the fermentation products shelf-stable, and the minerals much more bioavailable.

Equi-Knewe® is supplied as a pelleted product with a shelf life of at least 12 months, if stored in a cool, dry place, and protected from vermin.
